THE PROBLEM

The problem *we're solving*

PROBLEM STATEMENT

PS-02 · AI Content Studio for Brands & Creators

The manual bottleneck and 'generic AI slop' trap that makes automated multi-channel brand marketing look artificial, boring, and perform poorly.

WHO FACES IT

Solo founders, startup growth marketers, and digital agency creators who must post consistently on LinkedIn, X, and Instagram but lack full design and editing bandwidth.

WHAT IT COSTS THEM TODAY

- 3.5 to 5 hours spent daily copywriting, manually designing multi-slide carousels in Canva, and scripting reels across 4 separate tools.
- Standard LLMs generate repetitive, robotic 'AI slop' that audiences scroll past.
- Bandwidth exhaustion leads to creator burnout, missed schedules, and lost conversions.

SOLUTION OVERVIEW

What *we're building*

IN TWO OR THREE LINES

TrendForge AI is an autonomous multi-modal marketing studio that turns a single product URL or brief into publish-ready LinkedIn thought leadership, viral X threads, and auto-rendered Instagram carousels in under 60 seconds with zero generic AI slop.

WHAT THE USER DOES

- Inputs product URL, brief, or competitor's viral post link.
- Selects target brand persona and tone.
- Uploads brand kit assets (colors, typography, logo).

WHAT THEY GET BACK

- LinkedIn post with hook & whitespace optimization.
- High-retention X thread structured for virality.
- 5-slide Canva-grade visual Carousel (PNGs).
- 30s kinetic video script with audio narration preview.

TECHNICAL APPROACH

How *it works*

MODELS

Gemini 2.0 Flash / OpenAI GPT-4o-mini for rapid multi-agent hook extraction, tone adaptation, and Whisper/WebSpeech voice preview.

TOOLS & FRAMEWORKS

React / Vite + Tailwind CSS frontend studio. FastAPI / Node backend. HTML5 Canvas / Satori for programmatic SVG/PNG carousel slide rendering.

DATA

Curated viral copy frameworks (Hormozi, Justin Welsh hooks), public company datasets, and user brand kits. Strictly zero PII.

HUMAN APPROVAL

Interactive Studio Canvas: user reviews, live-edits copy or tweaks carousel color palettes before final 1-click multi-asset export.

KEY FEATURES

What it will do *by 1 Oct*

- | | | |
|----|--|--|
| 01 | Click Multi-Channel Repurposing | Converts 1 URL/brief into LinkedIn, X thread, and Instagram formats simultaneously. |
| 02 | Dynamic Code-Rendered Carousels | Programmatically designs and renders 5-slide visual image decks with brand styling. |
| 03 | Anti-AI Slop & Hook Virality Scorer | Scrubs generic robotic cliches ('delve', 'elevate') and scores human engagement potential. |
| 04 | Kinetic Video & Reels Storyboard | 30s Hook-Body-CTA reel script with on-screen kinetic text and audio voice preview. |
| 05 | Auditable Self-Critique Trace | Transparent log showing how the Critic Agent evaluated and self-refined the output. |

BASELINE & EVALUATION

How we'll *prove it works*

TODAY · WITHOUT YOUR SYSTEM

180 – 240 mins (3–4 hours)

Juggling 4+ separate tools (ChatGPT + Canva + Notion + Buffer). High manual design fatigue, frequent character truncation errors, and generic robotic AI output.

TARGET · WITH YOUR SYSTEM

Under 60 seconds

End-to-end multi-channel campaign pack (LinkedIn + X + 5-slide visual carousel + reel script) generated and rendered in a single browser studio.

HOW YOU'LL EVALUATE IT

- Benchmark suite of 25 real-world brand briefs across SaaS, D2C, and Creator niches.
- Metrics reported: Latency (<45s), 100% platform character compliance, zero graphic clipping, and human acceptance rate (>85% with <2 minor edits).
